Course Syllabus

EGR111 Introduction to Computer Science (C Language)

Spring 2023

Northwestern Michigan College

Class Schedule

Section	Days	Times	Room Location
XXXX	**Monday, Wednesday**	**3:10 PM – 5:10 PM**	**Zoom Virtual** – See Moodle for link

Instructor Information

Instructor: Keith E. Kelly
Office: (Virtual – use Zoom link provided)
Phone: 231-995-1312
E-mail: kkelly@nmc.edu

Office Hours:

Virtual Zoom office hours to be determined – see course discussions

Course Description:

An introductory course in computer science with emphasis on C/C++ programing. Topics include structured programming, control structures, functions, arrays, pointers, dynamic memory allocations, searching and sorting algorithms, file I/O, and top-down analysis of problems. Basic concepts of object-oriented programming will also be introduced. Group 1 course. (3 Credit Hours /4 Contact Hours)

Prerequisite Courses / Placement:

MTH 111-may be taken concurrently

Teaching Methods

We'll use lecture, homework, activities, and projects to understand course content. Coding activities will be completed using standard software developer tools running on a Linux-based Raspberry Pi single board computer. This device is required and must be purchased from the NMC bookstore. Instructional content is provided using open-source resources. A course textbook is not required.

This is an online synchronous course. This means that the course is delivered in a video conferencing format using the Zoom video conferencing software. You are required to attend virtual class sessions and attendance will be tracked. You will need access to a computer, a quality Internet connection, and a microphone. A video camera is also required. I expect students to have video cameras on during sessions.

Required Course Material:

Textbook: A textbook is not required for this course. Links to open-source resources are provided.

RPi Kit: A Raspberry Pi single board computer kit is required and available for purchase in the NMC bookstore. Please contact me if you are remote. We'll make arrangements to ship the kit to you.

Computer
Internet connection
Video camera
Microphone
Wi-Fi connection
Ethernet connection (this may require a USB adapter cable for your laptop)

Course Objectives / Learning Outcomes:

- Create C Language algorithms and solutions using standard industry tools.
- Experience and value static-typed coding.
- Create structured solutions using functions and scoping.
- Design solutions.
- Access and process data using arrays, pointers, file I/0 and data structures.

Course Outcomes:

Area	Learning Outcome	Assessment Tool
Knowledge	Students will properly use the basic syntax and semantics of the C/C++ programming language. Students will use the following computer science principles: top-down programming design, procedural and data abstraction, correctness and efficiency issues, data structures and algorithms, and computation theory. (CT)	Quizzes, Exams, End of Sprint Projects
Application	Students will apply problem solving when designing computer programs. (CT) Students will design and implement C/C++ programs using procedural computer programming language, supporting structured programming, lexical variable scope, and recursion, with a static type system.	End of Sprint Projects
Integration	Students will Identify relationships between computing and the other disciplines. Connect the knowledge in this course to real-life situations and experiences	End of Sprint Projects
Human Dimension	Self: Students will strive to improve areas of algorithmic structures in programming based on feedback. Others: Students will collaborate with peers during group work.	Classroom activities, Peer Coding
Caring – Civic Learning	Students will recognize the impact of computer programming on social and ethical aspects related to everyday use of computers in today society.	Coding/Solutions - Reflections
Learning How to Learn	Students will use programming concepts and develop programming designs not covered in class.	Project Extensions

General Education Outcomes:

Critical Thinking:

Students will skillfully conceptualize, apply, analyze, synthesize, and evaluate information gathered from observation, experience, reflection, reasoning, or communication.

Grade Determination:
Final grades will be determined as follows: Total of all deliverables including tests, quizzes, worksheets, homework, projects, and exams divided by the total possible points x 100%

Grading Scale:

4.0 = 93% or above
3.5 = 85 – 92%
3.0 = 80 – 84%
2.5 = 75 – 79%
2.0 = 70 – 74%
1.5 = 65 – 69%
1.0 = 60 – 64%
0.0 = below 60%

Proposed Assignments / Grading Criteria:

Assignment	***Points***	***Percentage of Final Grade***
Weekly assignments	300	30%
Projects (5)	500	50%
Exams (2)	200	20%
TOTAL	1000	100%

Attendance/Participation
You are expected to attend each class session. Students are expected to actively participate in class by asking questions, working on in-class exercises, giving presentations as individuals or as part of their team projects, and sharing personal experiences and opinions related to the topics discussed. Students who do not participate in class or miss more than 4 in-class hours without a pre-approved excuse will have their final grades reduced by one grade (i.e. 4.0 to 3.5). Be sure to contact me BEFORE you miss a class, if possible. Extended or initial absence can result in the instructor dropping you from the course.

Let me know about last minute emergencies via email or phone as soon as you can.

Late Work
Work must be submitted by the stated deadline. There is an opportunity to make-up missed points at the end sprints. The instructor will discuss the concept of technical debt and the for process making up points. This policy applies only to production and project work. Exam points cannot be made-up. See the course web site for descriptions of homework assignments. If you have a special circumstance, let me know in advance.

Makeup Tests and Presentation Date Changes
Requests for makeup tests or presentation date changes must be made in advance with the instructor or the student will get no credit for that item.

Honesty
I'm very aware of how easy it is to share your work when it is in electronic form. Be sure you are aware of the Student Code of Conduct found in the Student available here. Assisting others with assignments

and coding is expected. Providing copies of your work for others to copy is cheating. If you cheat, you fail the course.

How to Get the Most Out of This Learning Experience

Below are a few simple steps that will make this learning experience even better:

- Take charge of your own learning. Raise questions, prove, explore, go after what you need.
- Be open. Use your imagination, consider new possibilities, and create something new.
- Give as well as receive. Give liberally to co-learners and be prepared to receive a great deal from them.
- Have fun!!! Plan to thoroughly enjoy this opportunity to learn and to grow in your professional competence and satisfaction.
- Take advantage of the Raspberry Pi kit and your chance to experiment.

Syllabus Changes:

- The instructor reserves the right to make changes to the syllabus and will inform the class of any changes.

College-wide Syllabus:

- Visit the college syllabus available in the main menu to Moodle to view college policies and learning services information.

Tentative Course Itinerary: (subject to change)

The specific day-to-day activities, assignments and topics are located on the course Moodle page.

Week	Topic	Assignments , etc.
1	Introductions: Introduction to Course, C Programming, Linux Computer Kit, Coding Tools including Visual Studio Code and GitHub	
2	Variables, Data Types, Operators and Expressions	
3	Data Types, Casting, Input/Output	Sprint 1 Project Due
4	Control Flow – Branching and Iteration	
5	Nested Loops and Loop Control	
6	Introduction to Arrays	Exam 1, Sprint 2 Project Due
7	Functions – Arguments and Parameters	
8	Functions – Scoping	
9	Arrays – Initializing and Using,	Sprint 3 Project Due
10	Multidimensional Arrays	
11	Strings and String Functions	
12	Pointers	Exam 2, Sprint 4 Project Due
13	Dynamic Memory, File I/O	
14	Structures and Unions, Linked List	
15	Introduction to OOP	Sprint 5 Project Due
